

Objective: Separate the ring.

Too difficult?

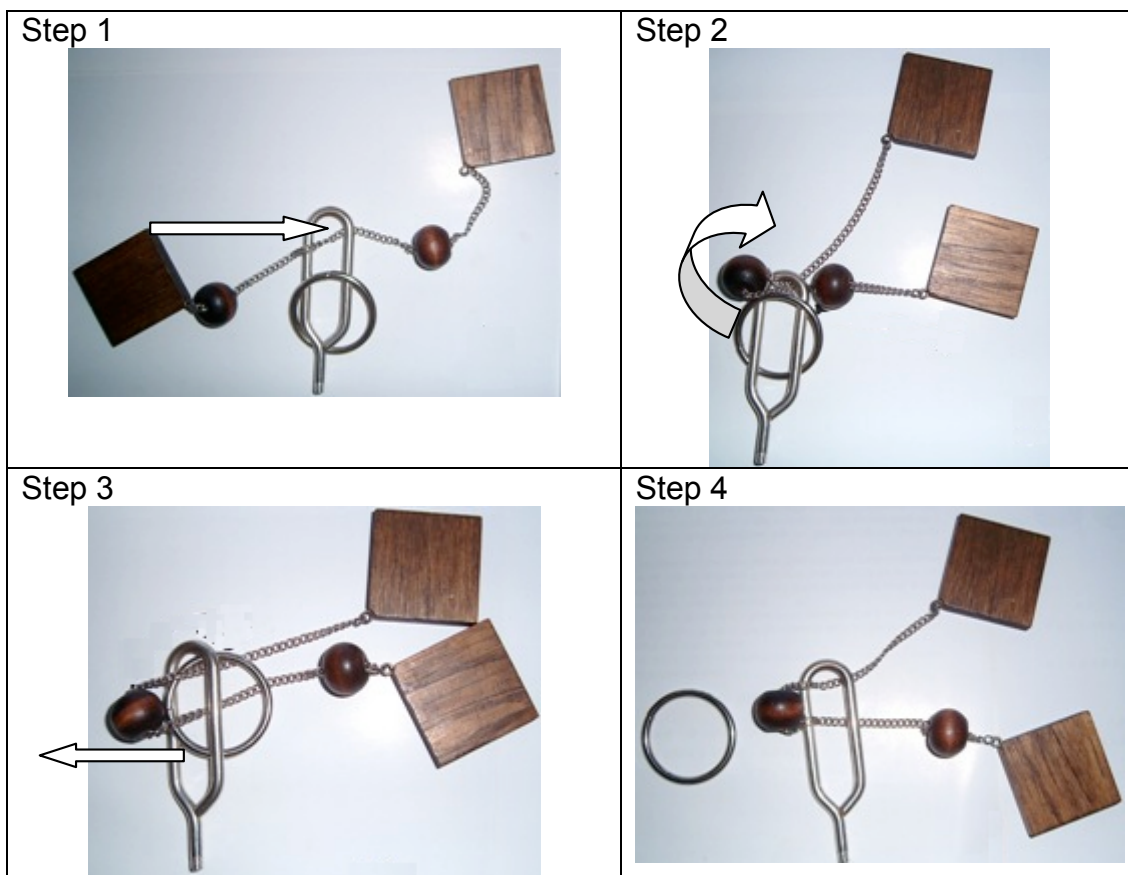

Take a hint from the solution below.

To Separate:

1. Start from Step 1 position. Pass the flat wood square on left between the inside of the metal knob, to the right side.
2. Now you should reach step 2, where you may find the wooden ball on the left side is the only obstacle to stop the ring from being released. Pull the ring over the said wooden ball and pass the knob end.
3. As in step 3, slide the ring back between the inside of the metal knob.
4. Now it should be released.

To Reattach

Make the reversed steps of the above.

ENJOY!
